

We create clinical and financial solutions that make employer health benefits more predictable, affordable, and sustainable.

Specialty Care Management (SCM) is the industry leader in risk management solutions for high-cost renal dialysis claims. SCM partners with clients to optimize claims cost, through a menu of innovative solutions, including outpatient Dialysis Cost Containment, Chronic Kidney Disease (CKD) Clinical Management, and Comprehensive Data Analytics (CDA).

## OUTPATIENT DIALYSIS COST CONTAINMENT

Outpatient Dialysis Cost Containment generates a Case Rate per claimant to reduce the annual healthcare spend. Inclusive of provider and management fees, the Case Rate will offer budget certainty on a previously volatile claim.

- Fixed, capitated Case Rate that is inflation proof
- Network, TPA and provider agnostic
- Significantly impacts Stop Loss Laser and premium by reducing plan exposure

## CHRONIC KIDNEY DISEASE (CKD) MANAGEMENT

CKD Management allows our Clinical Team to engage with high risk and active CKD members. If members choose to engage, their dedicated Nurse Coach will work with them to confront and manage renal related health issues.

- No implementation fees
- 24/7 access to clinical expert for the member and their caretaker
- Key objective is to prevent or delay dialysis

## COMPREHENSIVE DATA ANALYTICS (CDA)

CDA organizes and analyzes monthly claims reports to discover high risk and current CKD members, along with pending or current outpatient dialysis patients. This proactive approach allows for complete transparency for all parties involved.

- Fully integrates with medical claims to be reviewed monthly
- Early detection of CKD and dialysis for optimal member experience
- Renal Risk Assessment (RRA) Report will be provided to show trending/active risk
